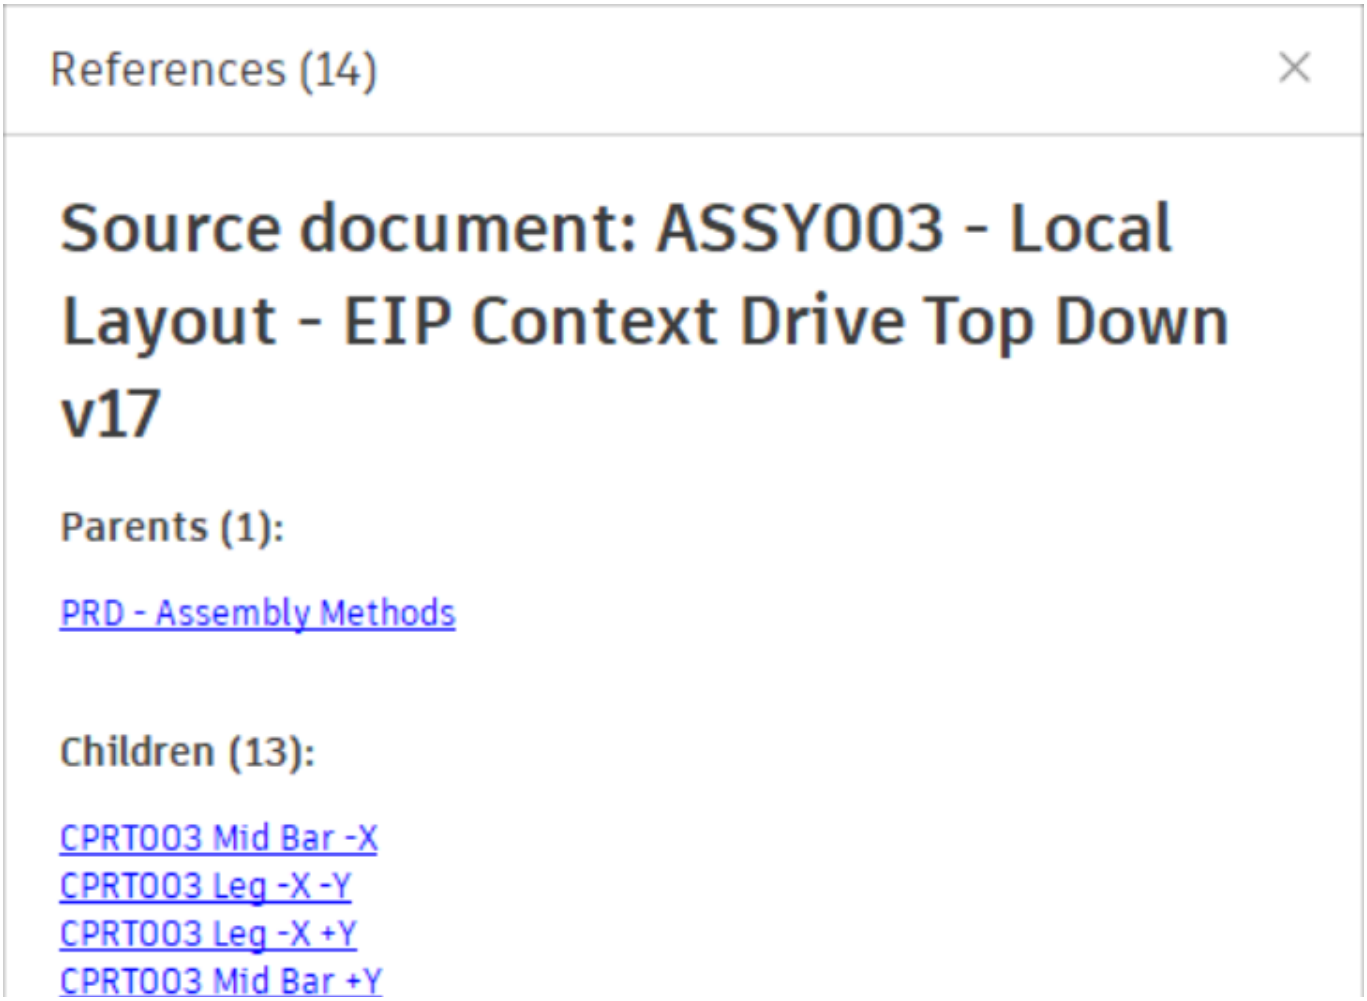
Document References

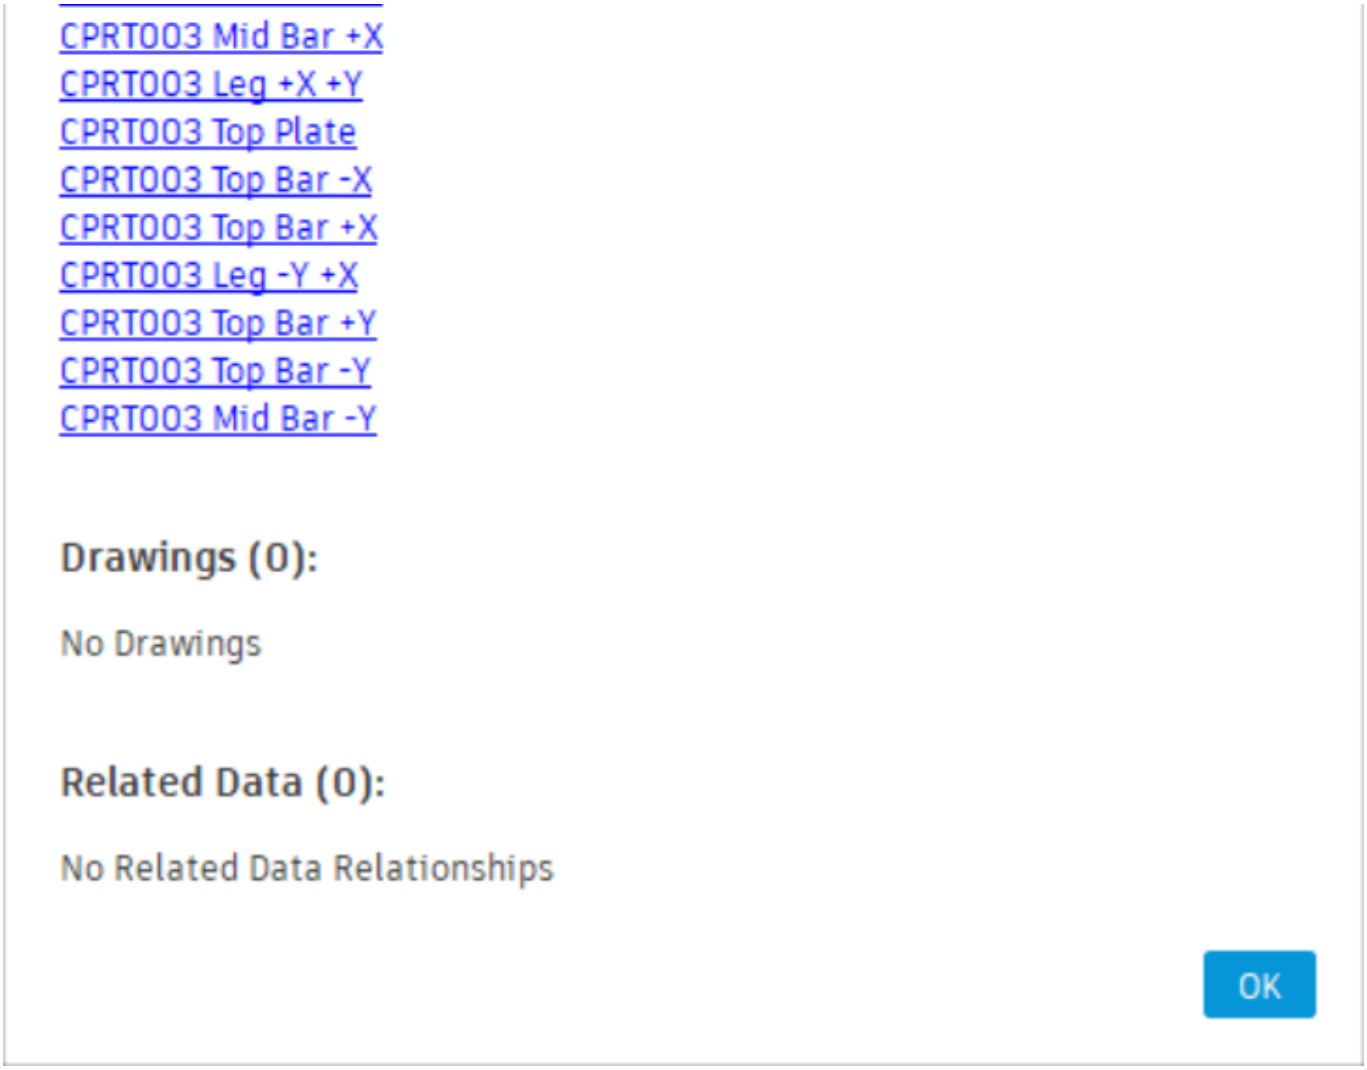
Back to Readme

Description

Document References reports all inbound and outbound data relationships for the active document in a single dialog. Relationships are grouped by type with a count for each group and a total count in the dialog title.

Group	Contents
Parents	Documents this document references (source files inserted as external references)
Children	Documents that reference this document
Drawings	`.f2d` drawing documents associated with this document
Related Data	Related documents created by the **Create Related Data** command (identified by the `‹+›` marker in their name)





Access

Document References is in the **Power Tools** panel on the **Power Tools** tab of the **Design Workspace**.
